Creative Solutions to Product Identification & Decoration

DuraFire™ Stamp Pads

The DuraFire™ Stamp Pads are designed specifically for the DuraFire™ Marking Inks. Most stamp pads are designed for standard water base inks, that move freely through the pad. DuraFire™ inks are heavier, and do not move freely in a standard pad. As a result the standard pad design partially blocks the ink from reaching the top. This process causes lighter or incomplete imprints, and premature dry pads. The DuraFire™ Stamp Pad construction is designed to provide continuous ink flow from padded bottom to the top.

The DuraFire™ Stamp Pad is designed for light stamping pressure which is less than for a standard stamp pad. When stamping, rest the rubber stamp on the pad without any pressure. Gently rock the stamp slightly forward, and backward. Then stamp on a sheet of paper to develop the pressure, feel, technique, and proficiency in the stamping on the DuraFire™ Stamp pad with DuraFire™ Marking Ink. Continue to make adjustments in the pressure, and movement in stamping until you develop good impressions.

Pads are clearly labeled with the DuraFire™ Marking Ink product numbers, which meets OSHA label requirements, and for multiple ink processes. There are four sizes to meet your marking requirements:

- | | | |
|-------|-----------------|-----------------|
| 1. #0 | 57 mm x 89 mm | (2.25" x 3.50") |
| 2. #1 | 63 mm x 108 mm | (2.50" x 4.25") |
| 3. #2 | 82 mm x 155 mm | (3.25" x 6.12") |
| 4. #3 | 108 mm x 187 mm | (4.25" x 7.37") |
